

ORLEANS

CONTINUED FROM PAGE FIVE.

Let everybody get ready for this sale. Gather together all the articles you would like to contribute and the society as heretofore, will send a team for them. Help on the good cause.

Miss Margaret Rowen had as her guest several days last week Fred Stone of St. Johnsbury. Miss Rowen has been caring for little Gordon Jones of St. Johnsbury the past two months and last Wednesday took him to his home. She expects to assist her aunt in the millinery business during the busy season.

Sunday at 10 o'clock in the new Catholic church on the Barton road, there will be solemn high mass, and between 40 and 50 children will receive their first Holy Communion and confirmation administered by the Right Reverend Bishop Rice of the diocese of Burlington, assisted by Rev. Father Chase of Sherbrooke, P. Q., and Eugene F. Cray of East Albany.

The Book and Thimble club held its first meeting of the year, Wednesday, Sept. 13 with the president, Mrs. Jennie Jones. Twenty-one members and nine visitors were present. Mrs. French, Mrs. Bartlett, Mrs. Rowell and Mrs. Kinsley were chosen for Library committee. Mrs. Julia Skinner, Mrs. Nye and Mrs. Minnie Twombly were chosen for condolence committee. Roll call was responded to by "Our Motto—How Best Attain the Ideal." Paper, "The Book in Its Making and Its Influence," Mrs. Ordway; reading, "The Song of the Shirt," Mrs. Kinney; paper, "History of the Thimble and Needle," Mrs. Bartlett. Music by the club was followed by a social hour, during which dainty refreshments were served. Club adjourned to meet Sept. 27 with Mrs. Kinney.

HOW TO CURE A SOFT CORN.

Nitric Acid if Used With Care is Usually Effective.

A painful thickening of the skin sometimes occurs on one of the several surfaces of the interdigital regions of the toes. This is ordinarily known as the soft corn.

The development of the lesion explains the resistance which it offers to topical medicaments. In fact, the epidermis, being in an irritated condition all round the small tumor, gradually encloses it with enlarged horny layers until it is completely covered. The first thing to be done, therefore, is to remove this circular epithelial barrier.

For this purpose the parts must be carefully washed with soap and water and then with alcohol. This suffices to render visible a little hollow covering on the top of the conical thickening, forming a kind of hood over the tumor. It may be gently removed by means of the point of fine scissors without drawing blood. In this way the small corn, the source of all the trouble, is laid bare.

All that is now required is to place a drop of nitric acid on the tumor by means of a small wooden rod and to leave it to penetrate the corn. The natural moisture of the parts favors the infiltration of the acid.

After a few minutes the tumor is carefully washed with diluted water, which quickly soothes the smarting resulting from the chemical cauterization. A moist dressing of aseptic cotton wool is then placed over it. This should be removed the same evening. On the following days the part should be washed with soap and water and a small roll of cotton applied. Toward the third or fourth day the brownish crust caused by the cauterization is cut out with fine scissors, and then a small wound is laid bare. This is soon healed when dressed with boiled water.

In case the first operation has not been sufficient, a fact which may be easily determined by touching the parts to find whether there is still any painful hardening, a new cauterization by nitric acid is practiced, followed by a similar series of dressings.

It is rare that a soft corn of average dimensions—that is, of the size of a millet seed or a lentil—resists a third cauterization.—New York Herald.

HOW TO CHOOSE A FREEZER.

Good Materials May Be Spoiled by a Poor Machine.

The quality of ice cream is due not only to the materials employed in its making, but also to the kind of freezer that is used. The good freezer makes a cream of smooth, velvety texture, seemingly richer in character than that coming from a poorer device. The poor freezer actually produces a cream of snowlike texture, seemingly made without cream, and if one did not know the truth one would say it had been both carelessly made and frozen.

The best freezers are those having wooden pails and well made metal cylinders. The pails are usually made of pine staves, held in place by welded hoops. In a few years we will probably have fiber pails, which will be lighter and probably more effective. The cylinder should be large in proportion to the size of the pail in order to facilitate the process of freezing, as well as to be saving of the ice and salt mixture. Time, labor and material are saved in the using of a freezer which is built in this way, and this is one of the most important things to look for in selecting a freezer. There should be no hole for escape of water, even with a plug in it, in the pail near the bottom. But one hole should be bored in the pail and that near the top, and no plug should be placed in it.

Two quarts of cream should be well frozen in from five to seven minutes and with ease in turning the dasher. Most good freezers are now fitted with large flywheels, turned by a small handle, which can be used in place of the old crank handle.—Good House-keeping.

See the Demonstration of

CHI-NAMEL

The Wonder Worker in Home Finishing...

September 23-25, 1911

The transformation that the Chi-Namel Graining process makes on scarred and battered floors, tables, chairs, weather-stained porch furniture, etc., is little short of marvelous. The simplicity and economy of this new process, places within reach of everyone the means for practical improvement in the beauty and tone of all home furnishings and woodwork.

Let us show you, by actual demonstration, the difference between Chi-Namel and other finishes and prove its great superiority.

Let us show you how, with the Chi-Namel process, any woman, however inexperienced, can give her floors a natural hardwood surface, can finish furniture, frames, etc., in any of the popular mission or antique tones. In fact, how Chi-Namel brings new floors, new furniture and new woodwork.

No carpenter's bills, no labor expense—just the famous Chi-Namel Ready-to-use Graining Materials—and the result will be an elastic, durable finish that will resist heel-paints, won't show hard usage, won't whiten or crack.

For Sale Only by

FRED D. PIERCE, Barton, - - - Vermont

GUNS GUNS

We are loaded with Guns and also loaded with Ammunition to load the guns

CALL AROUND AND LOOK US OVER

STOVES AND RANGES

As good stock as you can find anywhere. We trade for your old stove and will do most anything to make you happy.

Clothing

Is Moving These Days

Many have taken advantage of our

Removal Sale Prices

Many more are intending to.

The Values We Are Offering Are Tempting

To see them is to realize they are unequalled. This sale will continue for about

Two Weeks

So make the most of it.

Sizes must necessarily be somewhat broken, but we can surely fit and please you

Shoes, Hats, Cap's Shirts and other articles at a Reduced Figure

EVERYTHING TO WEAR FOR EVERYBODY

FALL DRESS GOODS

Ginghams, Percales, Serges, Panamas, Mohair, Brilliantine, Danish and Poplar Cloth.

Buttons will be used for trimming this Fall. We have Machine for making them to match all our dress goods.

AGENCY for BUTTER-ICK PATTERNS

We carry a stock of medium sizes but can obtain any size on short notice and mail same anywhere direct.

SWEATERS

We have a great assortment of these popular garments in all the latest shades.

READY-TO-WEAR VEILS

in Brown, Green, Grey, Blue, Pink, White, Champagne, Red and Black, at 50c, 75c, \$1.00, 1.25 also all shades by the yard at 25 cents.

Bees : Honey

A lot of nice 1911 honey in one pound cartons.

GLASS FRUIT JARS

We are overstocked at this season with pint jars. We will sell while they last

MASON, pints, 49c doz
LIGHTNING, pints, 59c doz
ECONOMY, pints, 69c doz

Extra Rubber Rings for all sizes
